

SMART REPORTS & TOOLS

Hermes produces a range of reports and also allows you to calculate your weighted EPI performance score.

- **Plan Commitments Participation Report**

This report replicates the report produced by TEC. With Hermes you can produce it at any time for any year.

- **EFTS Pivot Table**

This pivot table report allows you to view EFTS consumption and to filter and cross tabulate totals by various attributes such as funding source, classification, delivery site, etc.

- **Successful Course Completion, Qualification Completion, & Student Retention**

These reports are broken down by register level group. They are particularly useful as a means of monitoring performance through the year. Excel audit reports to accompany the reports are useful to identify underperforming campuses and programmes.

- **EPI Performance Score**

This tool allows you to calculate your overall EPI performance score and see where it stands against TEC's performance thresholds.

Newly Arrived - TEC Data Accuracy Files

A recent addition to Hermes is the ability to read in the CSV files produced by TEC as part of the data accuracy process. As with SDR files, this makes for easier viewing of the files. Hermes also tests the files against your SDR data and is thus able to identify if there are discrepancies. We know that historically (and again in 2014 for the 2013 EPI) the CSV files produced by TEC have not met the published specification. This means that the underlying dataset used for EPI calculation is incorrect with potentially dire results. In 2014 TEOs were reporting an understatement by TEC of up to 20% in course and qualification completion rates. The latest version of Hermes can immediately identify this type of issue and save an unseemly increase in blood pressure.
