Tip Sheet No.32

Checking for Take2 Updates

Adapt IT makes updates for Take2 available to download from the website. Numbered sequentially, the updates may include new functionality, fixes for known bugs, or enhancement requests.

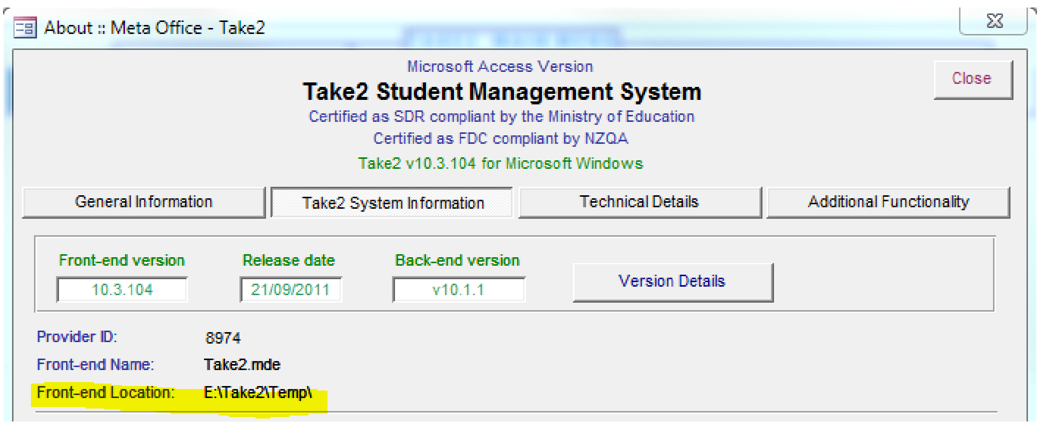
It is a good idea to check regularly for updates – as they could fix or prevent problems in the future.

Separate updates for the Main and Admin modules are made available. It is recommended that you update them both at the same time where updates are available for both modules.

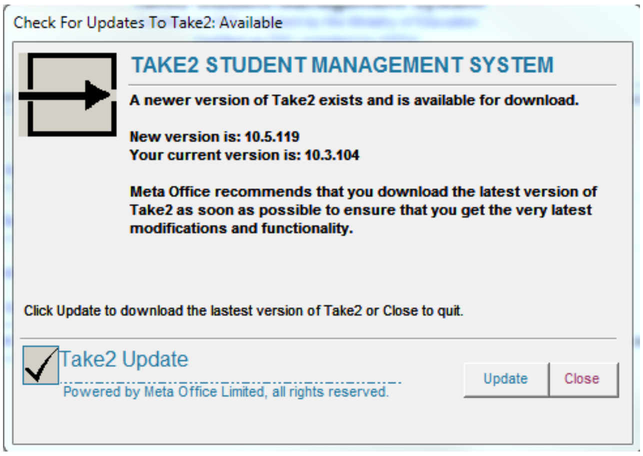
Checking if an Update is Available

1. Find the location where your Take2 modules are stored.
2. Click on the Take2 Student Management button in the Main module.

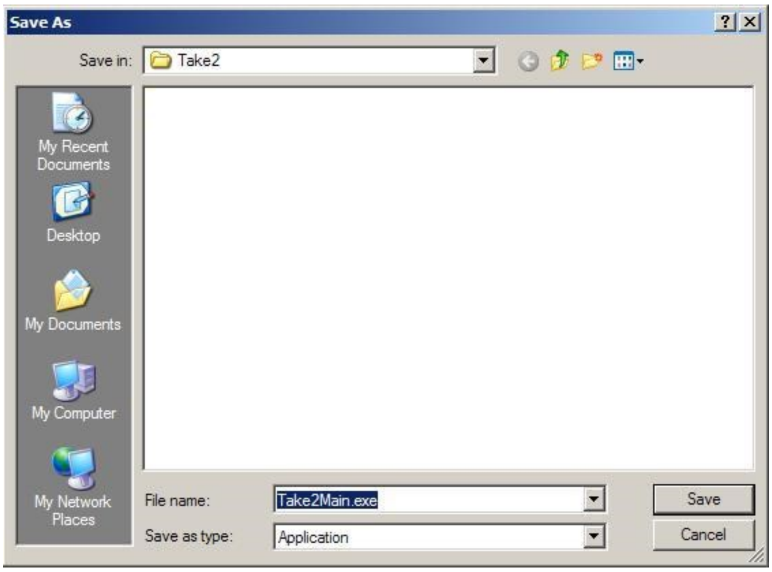
3. Click on the Take2 System Information button. This displays a form that shows the location. Make a note of it. Note - depending on your version of Take2 the front-end name may or may not be included in the front end location line.



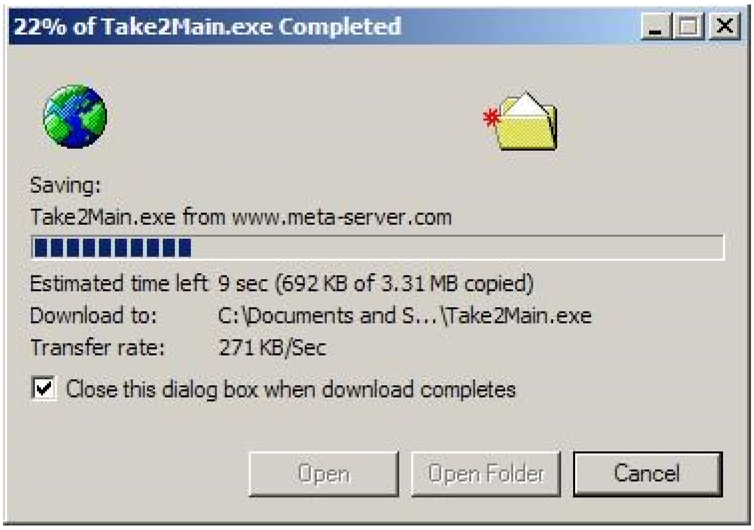
4. Click on the Additional Functionality button.
5. Click on the Check for Updates button.
6. Click on the Next button.



7. If an update is ready for download the Update button will become available. Note the old and new version numbers.
8. Click on the Update button.
9. Click on the Download button.
10. Click on the Save button.



11. Specify a location to save the update file. You made a note of this at step 3, above. Make sure that you can find the file again.
12. Click on the Save button.



13. Wait for the update to finish downloading.
14. Once the download is complete, repeat this process to check for updates to the Admin module.
